

March 25th, 2022

Dear Pre-K Families,

This week we have completed our unit on water and will be beginning to study plants and our environment! Please consider trying one or both of the activities below to continue to extend your child's learning.

- In class we looked at how some things mix and dissolve in water. Please consider whether there is water in the foods and beverages you eat and drink. Discuss the ingredients in the recipes you prepare and if you need to add water.

- Try making your own bubbles. Attached is a great outdoor bubble recipe. What can you use to make your bubbles? Try making your own wands with pipe cleaners or use slotted spoons, colanders, any many other things from the kitchen with holes! What kinds of bubbles do they create?

Thank you for your continued support!

Mrs. Blanco and Mrs. Buscemi
