Dear Pre-K Families,

This week we have begun our new unit theme on Plants!

You can continue to support your child's learning by completing one or both of the family engagement activities below.

- * Take a nature walk with your child to see how the natural world is changing in spring. Talk about the differences in your neighborhood or garden. What new growth can they observe? Use some of our vocabulary and discuss the stems, roots, leaves and blooms you see.*
- * Make a collection of seeds from the fruit that you eat. Compare the seeds - how many seeds are in the fruit? How are they the same or different? Try planting the seeds and observing what happens.*

Please also consider bringing your child outside to explore the plants in your yard or neighborhood. It would be exciting to look for some of the early signs of growth we read about in class!

Thank you for your support,
Mrs. Blanco and Mrs. Buscemi
